Dear Year 11 and Year 13 Parents and Carers

You may have seen headlines on 29th September regarding decisions that have been made about exams in summer 2023 for GCSE and A Level.

It would be fair to say that charting your way through this is not easy for students or parents. Decisions made about the examination season for Summer 2023 are made by Ofqual, the exam regulator, under guidance from the Government. I hope that the following information add a little clarity. I have also added a frequently asked question sheet.

- At a national level, grades will be in line with grades in 2019. This was always likely to be the case this year, after a one-year transition year when exams returned in 2022.
- However, there will be a safety net to ensure that, nationally, grades are not lower than they were in 2019.
- This means that, generally speaking, students have the same chance of getting a Grade A* or C at A Level, or a Grade 9 or 5 at GCSE, as in 2019.
- Exams in vocational and technical qualifications will also return to a 2019 grade profile.
- Formula sheets will be provided in the GCSE Maths, Physics and Combined Science exams, meaning that students will not need to memorise these formulae or equations.
- Advanced information about where to focus revision, which was provided in 2022, **will not be provided this year**. Students will need to learn and revise the whole specification as normal. Any topic could come up in the exam.
- If a student has studied the whole course but is ill during the exam period, they may be able to receive a grade by sitting one paper in the qualification rather than the previous rule of 25% of the assessment, although certification of illness will be needed.
- The exam boards are currently consulting on the exam timetable. In most qualifications, there is at least a week between the first and last exam paper to ensure that if students are ill for one paper, they are able to sit another. This is not dissimilar to the arrangements on the summer of 2022.

We all wish students the best of luck over the coming year, and hope they continue to work hard.

Yours sincerely

Mr M Quinn
Headteacher

Frequently Asked Questions

What does this mean for UCAS predicted grades?

The exams regulator, and UCAS, have confirmed that teachers should base predicted grades on pre-pandemic standards. This is something that every department in school has experience of doing.

Teachers will make predicted grades on the basis of UCAS's principles. The most important thing is that you or your child continues to work hard and produce high-quality work throughout the course.

This guidance means that predicted grades are likely to be lower overall than they may have been in 2021-2022. That is because we knew at that time that grades would be higher than in 2019. This year, we know that grades will be in line with 2019 so predictions are likely to be lower overall which will therefore be more accurate and more achievable, while still being aspirational.

Is it fair to return to 2019 grading?

Last year, the Department for Education and Ofqual announced their intention to return to a national pre-pandemic grade profile in summer 2023, so we were aware this was coming. The decision means that, at a national level, grades will be roughly the same as they were in 2019 (pre-pandemic).

However, the Government has put an additional safety net in place to ensure that, overall, grades in 2023 are not lower than in 2019. Because this cohort of students' learning was affected by the pandemic (although they weren't subject to national school closures during their course, unlike the previous three cohorts), we might expect the standard of work in exams to be lower than in 2019. However, the safety net will ensure that, overall, grades are not lower than in 2019, even if the quality of work is lower at a national level.

Colleges, universities and apprenticeship-providers are aware of the changing grade profile year on year and will factor this into their decision making. Because students are largely competing for places with other students in the same year, they are not disadvantaged by this policy.

Why were grades in 2020 – 2022 higher than normal?

In 2020, schools and colleges were asked to provide a centre-assessed-grade for students. Initially, these were then rounded up or down by an algorithm. After that, the initial centre-assessed-grade was used. This was during the national lockdown.

In 2021, schools and colleges were asked to provide a teacher-assessed grade based on the work that students produced throughout their course. Because the nature of the assessment was different, and schools were told to give students the benefit of the doubt when they were between two grades, this saw a higher proportion of students nationally achieve top grades and pass grades at A Level and GCSE than in normal exam years.

In 2022, the Government decided to have a transition year, with grades nationally at a midpoint between 2019 and 2021. The impact of this on schools is uneven mirroring the uneven impact of the pandemic.

What if I or my child has been particularly affected by COVID-19 over the last few years?

There is no current provision to give a different grade if a student has been particularly affected by COVID. The best thing students can do is to catch up with any learning they may have lost, and to talk to their teachers about any aspects of the subject they don't understand or may have misconceptions about.

Students may be able to receive special consideration if they are ill for one or more exam in the summer, but they must have studied the whole course to be eligible for this.

Other long-term illnesses should be discussed with your subject teacher or pastoral or academic lead.

What other adaptations are in place?

Formula sheets in GCSE Maths, Physics and Combined Science will continue. Subject teachers will use these sheets throughout the year so that students become familiar with them and how to use them.

The other adaptations that were in place for 2022 **are not due to continue into the 2023** summer exam series. This means that students must learn and revise the full content for each qualification they are taking.

How can we best prepare for exams next summer?

The best way of getting ready for next summer's exams is simple: full attendance; trying hard every day; completing all classwork and homework; revising regularly; acting on feedback and marking from teachers; and reading around your subject or asking for extension work.

Every teacher in our school/college will be able to advise you on what makes a successful student of their subject and will be happy to discuss this with you.

If you have any further general questions that are subject based, please contact your child's teacher, who will be able to advise you.
